1.Install VirtualBox or VMware Workstation on your computer and take a screenshot of the installation screen showing the software is installed.

Ans-

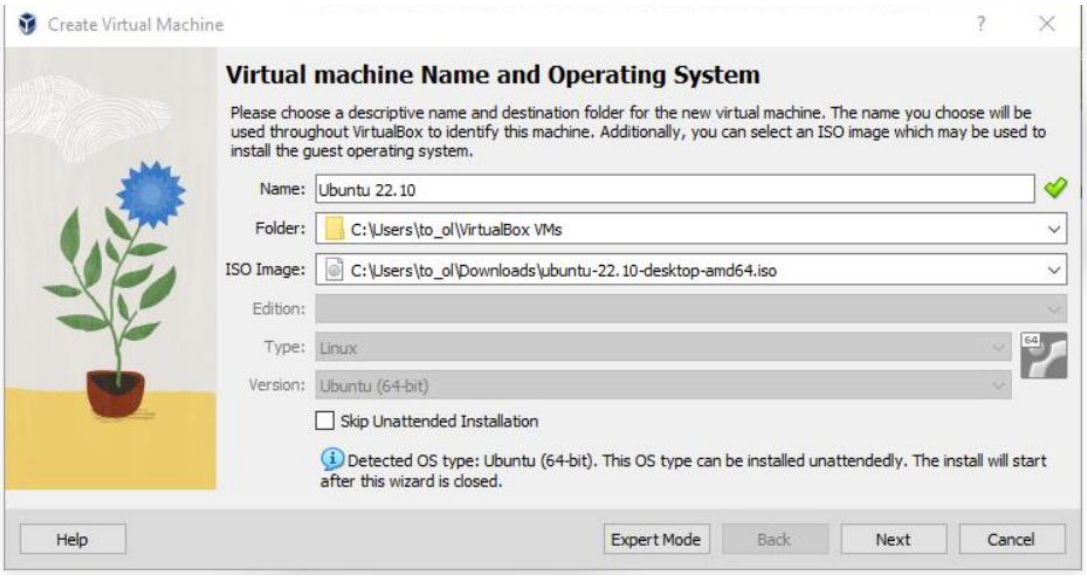

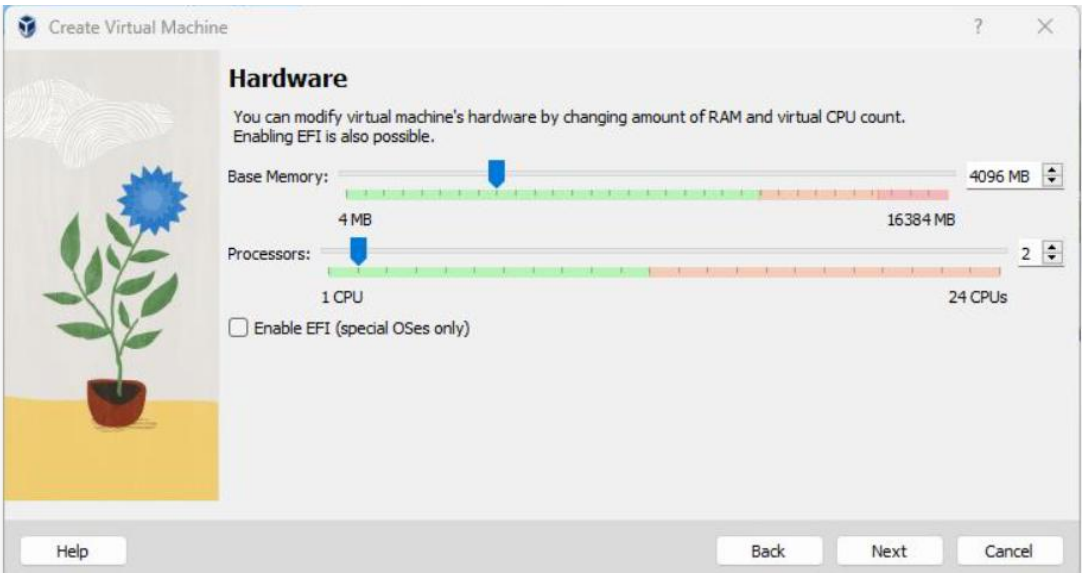

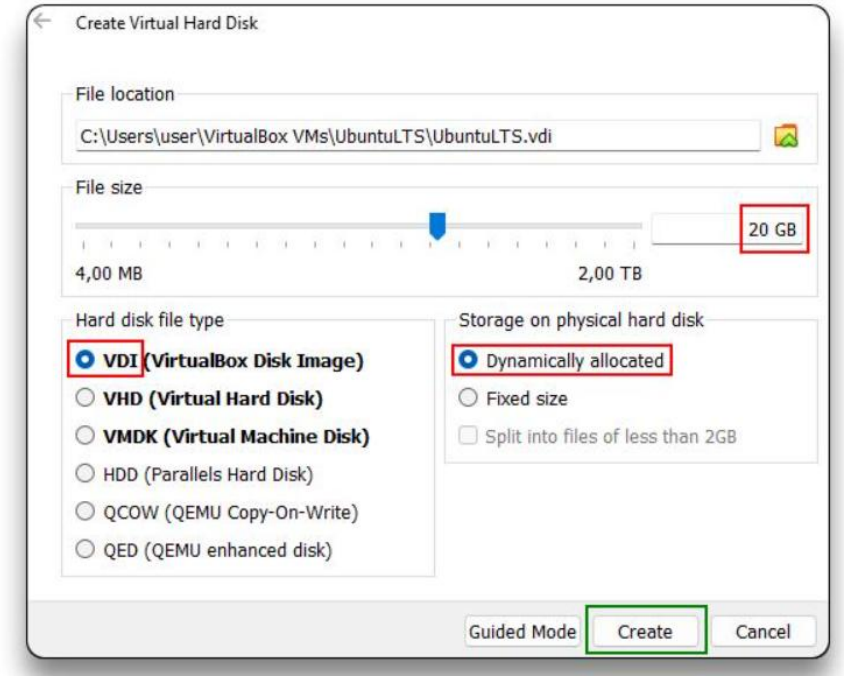

**2.Create a new virtual machine in VirtualBox or VMware Workstation and configure it to run Ubuntu Linux as the guest OS with at least 2GB RAM and 20GB storage.

Hint: Download the Ubuntu ISO file from the official website if you don't already have it.**

Ans-

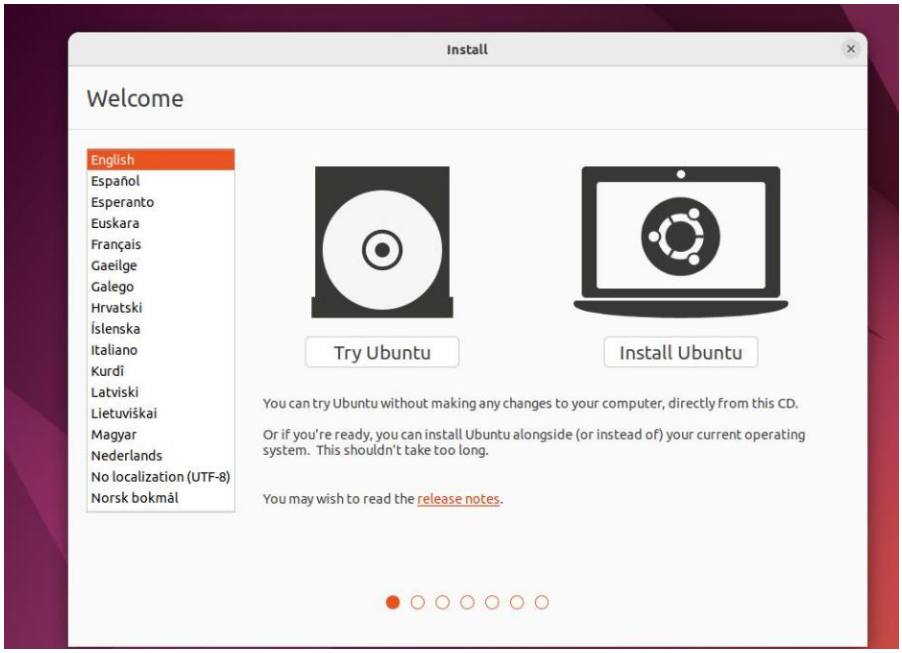

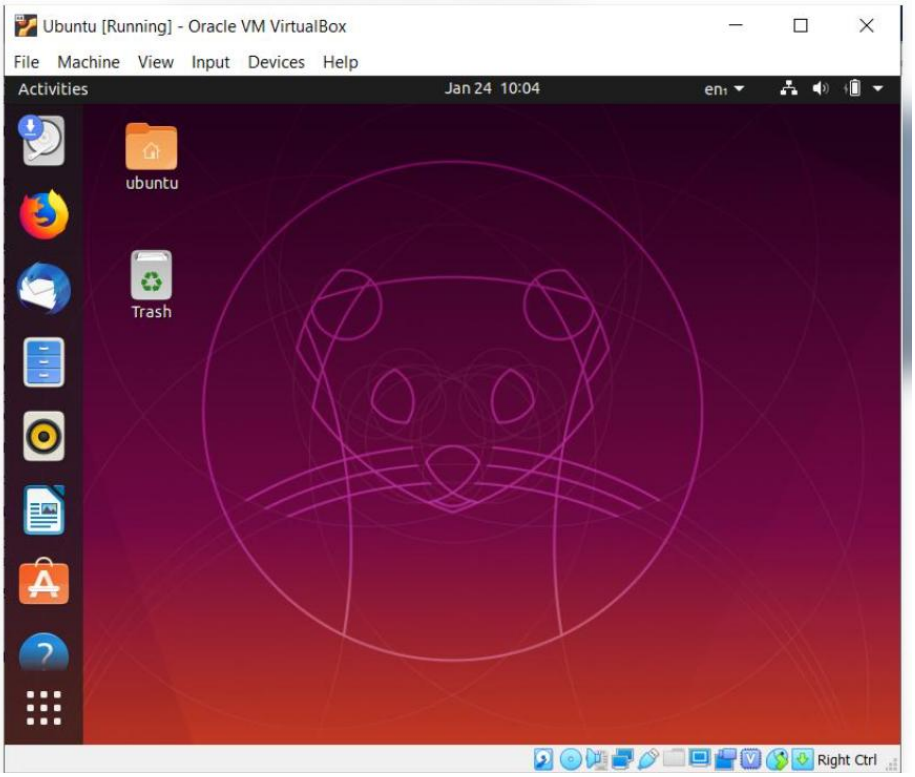

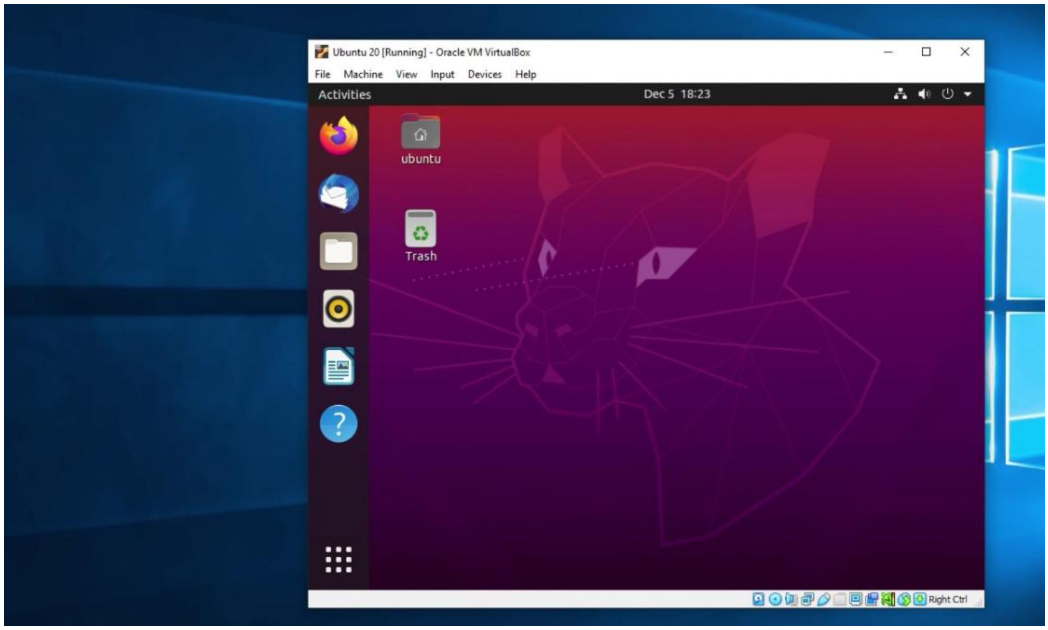

3.Start your Ubuntu virtual machine and take a screenshot of the Ubuntu desktop running inside the VM window.

Ans-

4.List 3 differences between Type 1 (bare-metal) and Type 2 (hosted) hypervisors, and name one real-world example of each.

Ans-

Type 1 Hypervisor	**Type 2 Hypervisor**
Runs directly on physical hardware.	Runs on a host operating system.
Generally provides better performance.	Has additional overhead from the host OS.

Commonly used in servers and data centres.	Commonly used on personal computers for testing and learning.
Example: VMware ESXi.	Example: Oracle VirtualBox.
