1.Use Google advanced search operators to find all PDF files related to 'Java interview questions' from the site geeksforgeeks.org and list 3 working search queries you used.

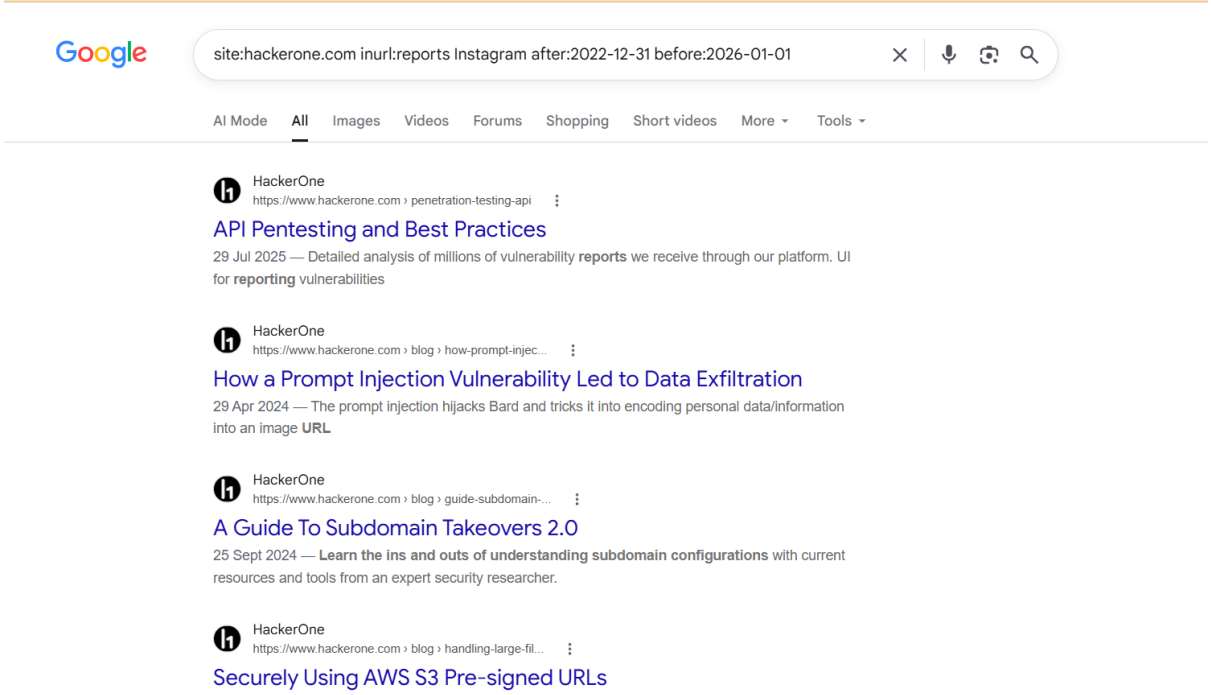

Ans-

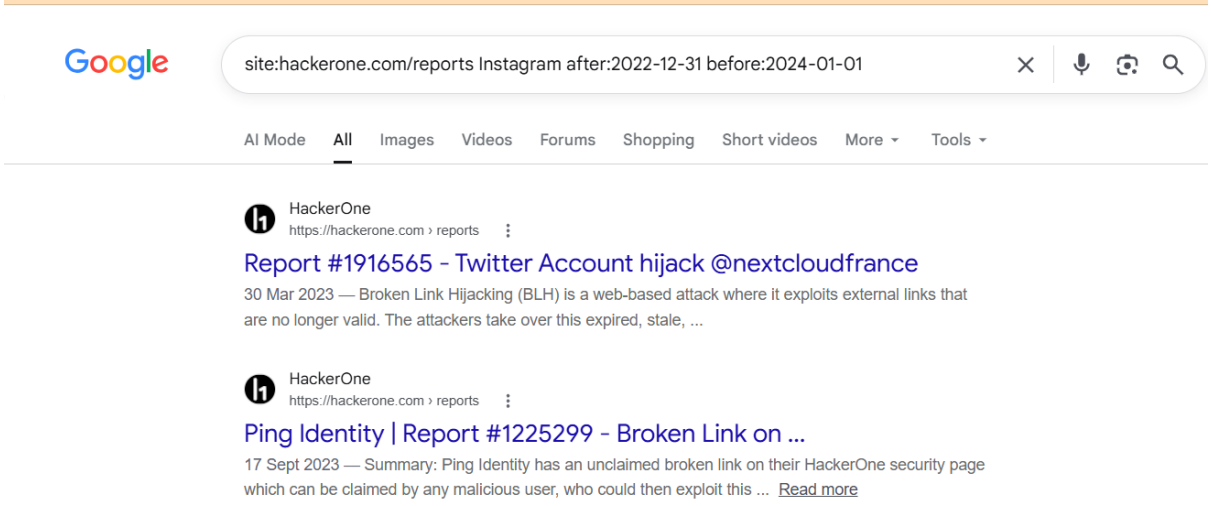

**2.Search for Instagram bug bounty reports from the past year by using Google search operators to restrict results to the site hackerone.com and only show pages updated in 2023.

Hint: Use 'site:' and 'inurl:' along with a date filter.**

Ans-

3.Find Flipkart coupon pages that are not linked from the main site by using Google dorking techniques to search for 'coupon' in the URL but exclude results containing 'expired'.

Ans-

Step 1: Open Google and run the following query:

site:flipkart.com inurl:coupon -expired

Test coupon query

Step 2: Try a broader variation:

site:flipkart.com inurl:coupon discount -expired

Test broader query

Step 3: Open any relevant results and verify the page URL and offer validity.

Operator	Meaning
site:flipkart.com	Restricts results to Flipkart's domain
inurl:coupon	Looks for coupon in the URL
-expired	Excludes results Google associates with the term expired

**4.Use Google search operators to discover public Google Drive folders containing IPL cricket match highlights and list 2 queries that return actual folders.

Hint: Try using 'site:drive.google.com' and filetype:mp4 or keywords like 'IPL'.**

Ans-

Step 1: Open Google and test the following queries.

Query 1 — Search Drive for IPL highlight videos

site:drive.google.com "IPL" "highlights" "mp4"

Test Query 1

Query 2 — Search Drive for authorized match footage

site:drive.google.com/drive/folders IPL highlights

Test Query 2

Step 2: Review the results and determine whether each link is a folder, an individual file, or a webpage.

Step 3: Verify that the owner has authorized access and sharing of the content. A Google result appearing in search does not establish permission to download or redistribute a video.

Step 4: Record the query, result type, and whether access is available.

5.Use ChatGPT to generate 3 unique Google advanced search queries that could help you find leaked email addresses related to any Indian fintech app (like Paytm or PhonePe) and test at least one of them in Google. Paste the queries and describe your results.

Ans-

- Paytm Mall (August 2020 / Retracted 2022): A report claimed a data breach affected 3.4 million users (exposing email addresses, names, phone numbers, and dates of birth), which was listed on Have I Been Pwned. Paytm Mall investigated, stated the data dump included information the platform does not even collect, and the claims were subsequently retracted and confirmed as fabricated/unsubstantiated.
- PhonePe (August 2026 / Unverified): Social media dark web intelligence reported an alleged PhonePe database leak, though it lacked visible samples, timestamps, or technical proof. PhonePe has not confirmed any official security breach.
