1.Create a comparison table listing at least 3 differences each between IaaS, PaaS, and SaaS, and give one real-world app example for each type (e.g., Spotify, Flipkart, etc.).

Ans-

Feature	IaaS	PaaS	SaaS
Full form	Infrastructure as a Service	Platform as a Service	Software as a Service
Meaning	Provides virtual servers, storage and networking	Provides a platform to develop applications	Provides ready-to-use software
Management	User manages OS, apps and data	Provider manages infrastructure and platform	Provider manages almost everything
Users	IT administrators	Developers	End users
Example	AWS EC2	Google App Engine	Spotify

Real-world examples:

- IaaS – AWS EC2: Provides virtual machines, storage and networking.
- PaaS – Google App Engine: Developers can build and deploy applications without managing servers.
- SaaS – Spotify: Users can listen to music through an internet-based application without installing or managing backend infrastructure

2.Pick any two apps you use daily (such as Zomato and Instagram) and explain in 2-3 lines how they might use cloud computing in their backend operations.

Ans-

App 1: Instagram

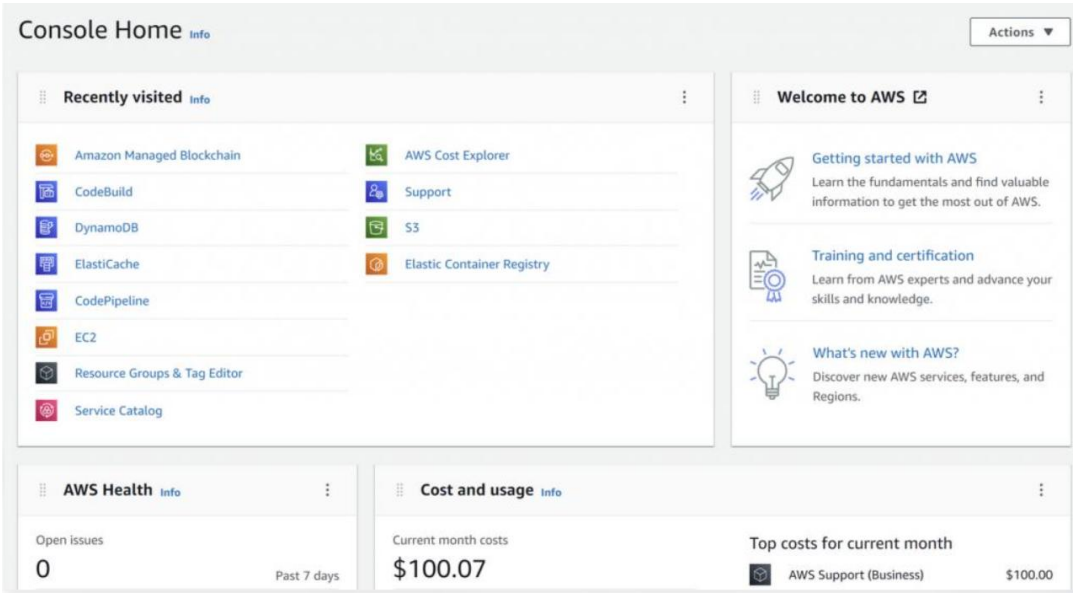

Instagram uses cloud computing to store photos, videos and user information. Cloud servers help process requests, deliver content and support millions of users.

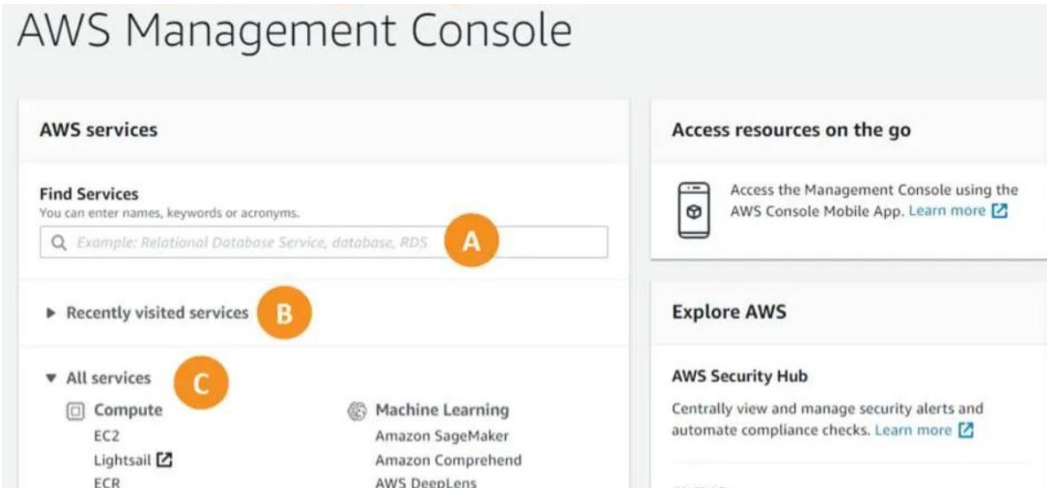

App 2: Zomato

Zomato uses cloud computing to manage restaurant information, customer orders and delivery tracking. Cloud infrastructure helps handle high traffic and process orders efficiently.

3.Sign up for an AWS Free Tier account (use your own email/phone), log in to the AWS Management Console, and take a screenshot of your dashboard showing your account name.

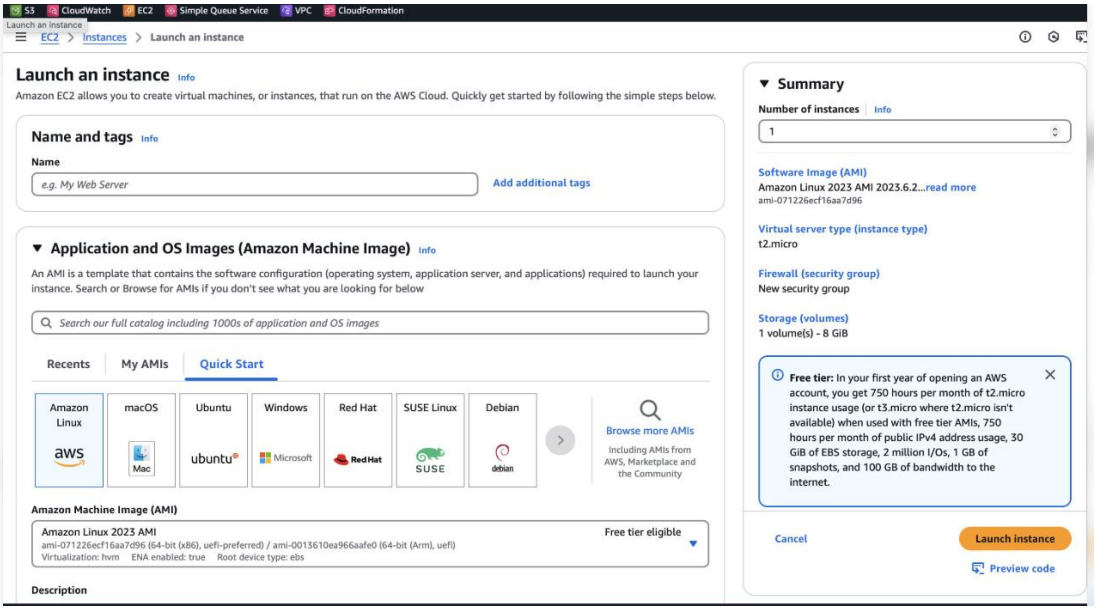

Ans-

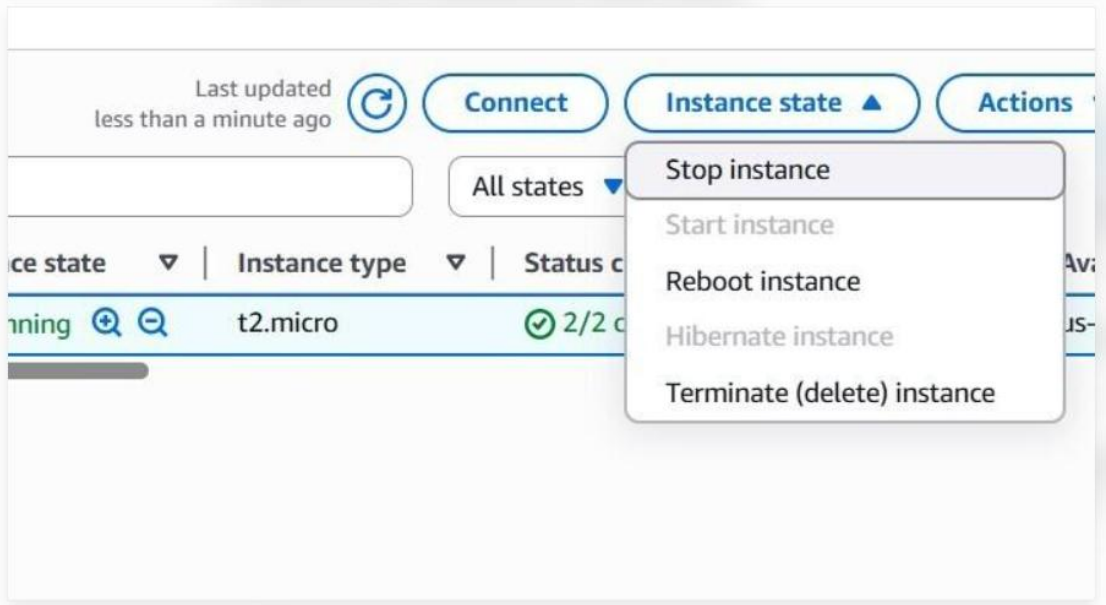

4.Launch a basic EC2 instance on AWS using the Free Tier (choose t2.micro, Amazon Linux 2), and once it is running, take a screenshot of the instance details page showing its status.

Ans-

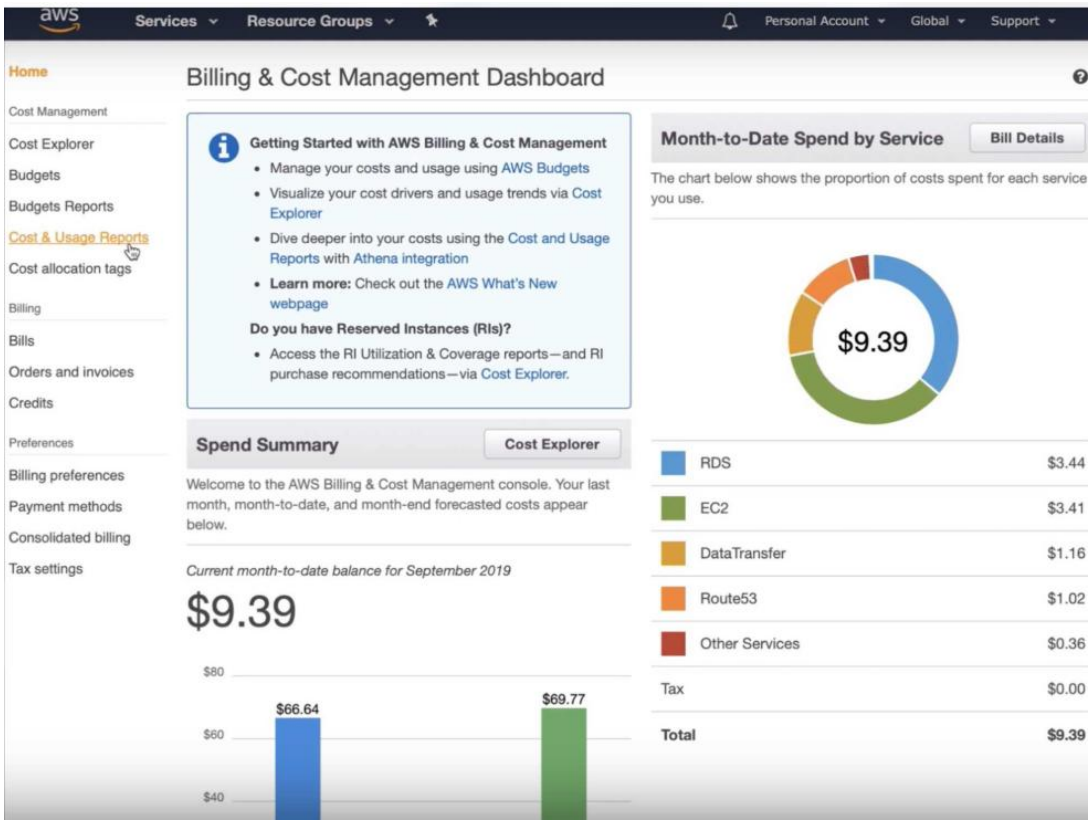

**5.After launching your EC2 instance, stop it from the AWS console and note the changes in its status and billing estimate.

Hint: Check the 'Instance State' and 'Estimated charges' sections in the AWS console.**
